SUMMARY

Study of organic fluids and tissues by infectious diseases' specialists and labs from patients who have recovered from the COVID-19 disease to create as soon as possible immunity, preventive vaccines, antibodies, etc.

INTRODUCTION

Considering the complexity of the on-going crisis originated by COVID-19, we believe that studying the organic fluids and tissues from patients who have recovered from this disease would be beneficial to create as soon as possible immunity, preventive vaccines, antibodies, etc.

MATERIAL AND METHOD

It would include blood sample testing and pertaining tissues, on the condition that the selected patients have recovered from the disease to generate specific vaccines.

CONFLICT OF INTEREST

To the best knowledge, no conflict of interest has been identified apart from supporting and encouraging the research above to find as soon as possible an effective preventive or not treatment against COVID-19.
